

The Self-Driving Data layer for the Snowflake AI Data Cloud

Cortex AI reasons over your data. Every dashboard, agent, and decision rides on what's in your tables. Anomalo is the most deeply integrated autonomous data system for Snowflake to make sure that data is trustworthy. Automatically and continuously deliver DQ context directly into Cortex agents. No thresholds. No SQL.

100%

Runs inside your Snowflake account via Snowpark Container Services

Self-Driving Data

Autonomous insights, triage, documentation, and conversational analytics

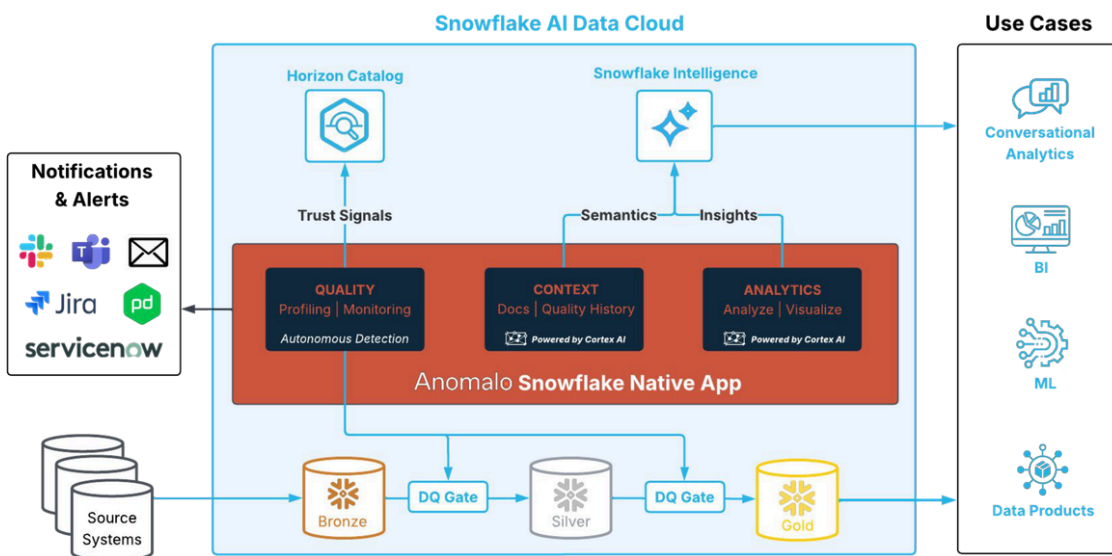

Enterprise results

Scale proven across Discover, Block, Faire, Notion, BuzzFeed

1-click

Install from Snowflake Marketplace, MCD-eligible, standard agreement

HOW WE WORK TOGETHER

Anomalo’s innovative approach to data quality perfectly complements Snowflake’s mission to enable every organization to be data-driven...all within the secure environment of the Snowflake AI Data Cloud.

Unmesh Jagtap
Director of Product Management,
Snowflake

WHY THIS COMBINATION WORKS

1. Depth

Deep, content-level monitoring, not just metadata.

Snowflake’s native DQ handles freshness and completeness. Anomalo extends to value distributions, column correlations, and historical trends — AI-native monitoring across billions of rows with no thresholds to author.

2. Reach

DQ context signals delivered into Cortex agents.

Anomalo’s proprietary AI engine learns what “normal” looks like across your data. No thresholds, no rules, no configuration. When data drifts, Anomalo catches it before it reaches your agents. This is what makes autonomous AI trustworthy in production.

3. Trust

A Snowflake Native App so your data stays put.

100% containerized on Snowpark Container Services. Cortex-hosted models for AI features. MCD-eligible, 1-click install from Snowflake Marketplace, standard Snowflake terms.

Why Snowflake customers choose Anomalo

10X

Cost Savings

Reported by enterprise customers replacing rule-based DQ programs

90%

Faster Time-to-Insight

Versus legacy monitoring approaches

Exabyte.

Scale, in production

Trusted by Discover, Faire, HomeToGo, BuzzFeed, Notion, Block.

“We monitor **hundreds of key tables** in Snowflake's platform with Anomalo. I sleep better at night knowing our data is more reliable, and my team loves how easy it is to use and how insightful the notifications are.

Daniele Perito

Chief Data Officer & Co-founder, Faire

“Anomalo's AI identifies late, missing, or anomalous data across our petabyte-scale warehouse — with **a fraction of the time** invested by our team.

Keith Toney

CDAO, Discover Financial Services

Deploy in minutes. Data never leaves your account.

Anomalo's Snowflake Native App is the first fully containerized data quality solution on Snowflake Marketplace, running entirely on Snowpark Container Services and MCD eligible.

- Non-technical install via the Snowflake UI
- Eligible for Snowflake Marketplace Capacity Drawdown credits
- Cortex-hosted model support for AI features
